

Engineering Case Study Lessons Overview

This collection includes 10 case studies that link the world of engineering to Key Stage 3 Science. These are not intended as 'add-ons' to your busy schemes of work, but as an alternative way of teaching the science you teach every day, using real-life contexts.

In addition, you can use these resources as in-school Continuing Professional Development, using the key below as your guide.

The main outcome is to demonstrate that engineering is embedded within the Science curriculum, so to build confidence of those teachers who may not realise that much of what they teach is used by the engineering world.
