

you need:

- counters in two colours
- 1–6 dice
- calculator

Three in a row for 2 players

Take turns to

- roll the dice twice and say the numbers
- divide one of the numbers by the other one (use the calculator if you need to)
- put your counter on the answer on the grid (if that number is used up, roll the dice)

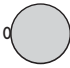

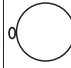

The end of the game

The first person to get three counters in a line is the winner.

Play five games to find the overall winner.

Sample game

White wins.

 6	0.5	0.25	 3	 6
