

you need:

- counters in two colours
- pens or pencils
- scrap paper

Secret targets

 for 2 players

How to play

Each player chooses a secret target from 3.0 to 4.0 and writes it down.

Take turns to put a counter on one of the boxes above. You win that number.

Go on like this until all the numbers are covered.

Now try to make your target by adding up numbers you have won – **some** of them or **all** of them.

If you can make your target, show your partner how you have done it.

Winning:

- if you both reach your target, the person with the higher target wins
- if just one person reaches their target, they win

Now play again, but let your partner know your target. Which game do you prefer?

Sample game

Amber had a target of 3.3.
She won these numbers:

1.2 1.0 0.8 0.3 0.1 0.4

She made her target by adding up the first four of them.

$$1.2 + 1.0 + 0.8 + 0.3 = 3.3$$
