

Dropped digits

Put the numbers back in the boxes, to make a true equation.

$$\square\square \times \square \times (\square - \square) = 36$$

5 3 1 4 2

And do the same here.

$$\square\square\square \div (\square - \square) = 260$$

6 0 7 9 8

Now make up a puzzle like this for a friend to do.
