# Spot the shape

Choose a shape in secret and write down its number.

Your friend must try to guess which shape you chose.

They can only ask you these questions.

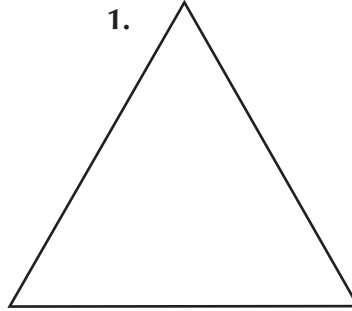

- is it a rhombus?
- is it a rectangle?
- is it a triangle?
- is it square?
- are all its sides equal in length?
- is it a parallelogram?
- has it more than four sides?

Can they identify your shape with only two questions?

With three questions? Or more?

Are there any shapes they can't identify with those questions?
