

A running track for your school

If you are lucky enough to have a **running track** at school, find out how the people responsible for the track mark it out.

How do they check the distances for accuracy?

Check the staggers and see how they compare with the ones you designed.

- If you do not have a running track, explore the school grounds to find a place where one could be made.
- Use your previous work to make a sensible estimate for the smallest space that could be used.
- Measure up to see how a track could be fitted in.
