

## Air pollution

### Activity sheet A

### Air pollution – where does it come from?

---

Use the 'Information sheet – Air pollution – where does it come from?' to answer these questions.

- 1
  - a Name four gases which cause air pollution.
  - b For each gas name:
    - i a natural source of the gas
    - ii a human activity which produces the gas.
  
- 2
  - a Use the data in table 1 to plot a bar chart showing the amount of each gas made by natural sources each year.
  - b On the same graph, using a different colour, plot the amounts of each gas from human sources using table 2.
  
- 3
  - a For which gases is the amount of pollution produced by human activities about the same as the amount produced from natural sources?
  - b For which gases is the amount of pollution produced by human activities more than the amount produced from natural sources?
  - c For which gases is the amount of pollution produced by human activities less than the amount produced from natural sources?
